

It's dirt cheap and works like crazy...

How To Use The Secrets Of Sea Minerals To Grow More "Nutritionally-Dense Food" Than You Can Possibly Eat!

**"If You Are A Gardener
Or Farmer Here Is An
Amazing Supplement
That Can Re-mineralize
Your Soil And
Increase Yields While
Growing Truly Healthy,
Chemical-Free Crops
For A Fraction Of What
You Normally Spend!"**

From:
Bill Heid
Thomson, Illinois
July 1, 2014

Dear Friend,

When the devastating tsunami hit Indonesia on December 24, 2004, much of the agricultural land was flooded by sea water for a short period of time.

Because of this, agricultural experts said the land would be desolate and unable to be farmed for at least ten years because of the salt content of the sea water.

However, the following year, farmers - desperate to provide for their families and make a living - planted anyway. And something amazing happened that totally confounded the experts...

**They Experienced Bumper Crops
Never Seen In Their Lifetime!**

In fact, one farmer, Mr. M. Yacob said, "The sea water turned out to be a great fertilizer... we are looking at yields twice as high as last year." Similar reports became common throughout the region.

Why were all the agricultural "experts" dead wrong about the effects of sea water? For the same reason "experts" and "professionals" in many fields are often wrong. They ignore any ideas or research that doesn't fit their agenda... or... are outside of conventional or traditional ways of thinking.

If they had taken the time to look into the remarkable phenomenon that happened in Indonesia, they very well may have discovered the all-but-forgotten research of Dr. Maynard Murray and the virtually unknown process he called...

Sea Energy Agriculture!

Dr. Murray was a biochemist, research scientist and medical doctor who developed this amazing technology after pondering a single question...

"Why Does Man... God's Most Perfect Creation Fall Prey To Degenerative Disease?"

Dr. Murray searched for answers to this question by studying various groups of centenarians (humans who regularly live beyond 100 years of age) throughout the world to determine why they lived so long.

Since he could not find any obvious differences, he began to examine more carefully the soils in the regions where these folks lived as well as the foods they ate. And after considerable study...

He concluded that the answer must be in the soil and the food these centenarians produced and consumed which came from the soil. As a scientist and someone who specialized in understanding the periodic table of elements, he wondered how many of the 90 or so water soluble elements of the earth's crust remained in the soil and were available for plant growth and development.

He conducted analysis of all the soils and the produce grown from various agricultural regions and discovered large

"Seawater is the most ancient natural solution on earth, and in my opinion, it is the most ideal physiologically."

- Dr. Maynard Murray

discrepancies in elemental mineral and vitamin content. He also studied the soils microbial activity and life.

As a result of discussions with other scientists, he then learned that cancer or cancerous tumors were very rarely found in ocean life forms. Knowing that the sea once covered all land masses, he directed his research to the study of sea life.

During the next several years, he traveled for months in fishing boats dissecting thousands of species from the seas and did not find any traces of cancer, heart disease, or other degenerative diseases. His research concluded that aging on a cellular level does not occur in sea life the same way it does on land life.

Dr. Murray then analyzed the mineral composition of seawater and found more than 90 water-soluble elements present in a perfectly proportional matrix. When an excessive amount of any element flows into the sea through erosion or run off, it precipitates out or drops to the sea floor to keep the proportional balance constant.

And because of this discovery, he determined that sea life lives and feeds in an environment...

Where Trace Elements Exist In Nature's Perfect Balance!

Dr. Murray discovered that our agricultural soils, and consequently the food grown in it, are seriously depleted of minerals through leaching, erosion and over-cropping. Current agricultural practices replaces only 6 to 12 of the 40 elements considered critical for optimum plant growth and development.

Dr. Murray questioned if the 90+ elements he had found in sea water are essential. He knew that all individual cells in the human body are constantly replaced during the process of cell division. While cell division occurs, the cells are supplied with elements and nutrients provided by the food ingested. When critical elements are no longer present in our foods, they become nonexistent in our bodies. This makes normal cell replication difficult and could explain the cause of many degenerative conditions.

*"A cubic foot of seawater sustains many times more living organisms than an equivalent of soil."
- Dr. Maynard Murray*

Therefore, Dr. Murray deduced that the only logical explanation for the frightening increases in cancer and other

forms of chronic degenerative disease is the absence of a complete and balanced chemical physiology.

Dr. Murray also theorized that the most efficient method to re-mineralize our precious soils (and just as importantly our foods) to their optimum mineral composition is to recycle the elements lost to the sea back into the land.

Thus, the technology of Sea Energy Agriculture was discovered.

Dr. Murray conducted extensive agricultural research trials during a 30 year period. All trials were focused on chemistry and biology of plant to animal nutrition. In his initial greenhouse experiments, he utilized the highest quality sea water collected by the U.S. Navy three miles off shore in the Atlantic Ocean. He poured small amounts of sea water on the soil and determined that the 3.5 percent mineral solids in sea water had...

An Amazing Effect On Plant Growth And Development!

As Dr. Murray began planning large scale experiments and field trials, he realized that the cost of securing the amount of sea water necessary to provide the required mineral solids to adequately re-mineralize soil was economically cost prohibitive.

He searched the world for a natural source of pure sea mineral solids that are elementally exactly the same as the ocean water the U.S. Navy previously supplied. Fortunately, he discovered the perfect location in North America and started cultivating the remarkable "pure sea" mineral solids we now call **SeaMazing Minerals**.

SeaMazing sea mineral solids, created in this remote location are unique in their mineral and trace element richness due to five major factors:

First: SeaMazing Minerals are created from a sea enriched with several million tons of top soil deposited into its delta by a powerful river.

Second: Mineral rich Pacific Ocean water, with its full spectrum elements, is also blended into the complex to further add to the mineral balance.

"SeaMazing is the most complete mineral and trace element product ever offered for self-reliance gardening."

Third: Rare earth elements are added to this sea water mix from geothermal vents along a fault line on the sea bottom.

Fourth: The location's climate has average temperatures exceeding 100°F and less than one-half inch annual rainfall guaranteeing quick solar dehydration and a complete mineral package since no elements are leached away.

Fifth: And most importantly, the area is extremely remote insuring a pollution free harvest of minerals.

These sea mineral solids (not sea water) were then utilized in Dr. Murray's amazing research.

All Dr. Murray's experimental data and conclusions were based on the use of sea mineral solids as a soil supplement... and **SeaMazing Minerals** come from the exact location the research was based.

So, what does all this mean in terms of benefits to you?

The most important thing about gardening with sea minerals is the ability to grow full spectrum, "Back to Eden" fruits and vegetables in your backyard. Dr. Murray believed with all his heart that poor quality, low or no spectrum food was at the heart of degenerating health. You can use **SeaMazing Minerals** to grow the kinds of nutritionally dense foods you could never buy in a store.

"It's easy to grow sweet-tasting giants with SeaMazing!"

Second, the taste of **SeaMazing** supplemented fruits and vegetables is simply beyond imagination, especially if you are using heirloom varieties. It's my belief that trace minerals are the code that actually "unlocks" exceptional taste.

And, if you're gardening for self-reliance... here's great news: You'll also maximize garden production, as well as increase shelf life of all the produce you decide to "put up" for the rest of the year.

Some folks even report reduced losses due to frost, drought, insect and disease. I think this is because the plant is just plain stronger and healthier from the full spectrum feeding.

If you are a farmer or gardener, you can utilize **SeaMazing Minerals** to reduce operating costs by using less fertilizer, harmful pesticides, insecticides and fungicides.

And this is really important: Livestock fed nutrient-dense crops and pasture seem to mature to their full weight and size in a lot less time with a lot less feed. Many farmers report greatly improved health of livestock and fewer abnormalities.

Frequently Asked Questions About SeaMazing Minerals

Q. What are SeaMazing Minerals and how are they produced?

A. SeaMazing marine mineral solids are natural crystals produced through solar dehydration of H₂O from sea water trapped in retention ponds. **SeaMazing Minerals** differs from all other sea minerals currently on the market because it's created from a place where the sea is considered to be one of the most mineral-rich on earth, in an arid environment where annual medium temperatures continually exceed 100° F, and with an annual rainfall of less than 0.5 inches.

SeaMazing is not mined from the remnants of an ancient dried sea bottom where contaminating leaching inevitably occurs and decreases the number of minerals and trace elements.

SeaMazing is produced multiple times each year from fresh sea water that naturally floods our estuary.

Q. What are some of the various ways I can use and benefit from SeaMazing Minerals?

A. You can:

- Grow nutrient dense forage and crops for livestock and poultry
- Mix with diatomaceous earth to create natural livestock remedies
- Apply as foliar a spray to re-mineralize any "self-reliance" garden
- Dissolve and incorporate into liquid row support and drip irrigation
- Add to your compost and compost tea to increase biological activity

Along with your order of **SeaMazing**, you'll receive a bonus application rates and usage report that details the various ways **SeaMazing** can be utilized for livestock, poultry, soil remineralization, pasture hay and all crops.

Q. What is the cost difference between SeaMazing Minerals and other sea water products currently offered to growers?

A. There are several companies that sell ocean or sea water products to farmers and hydroponic growers for fertilizer and foliar application for as much as \$80 per gallon with instructions to dilute to 1/100 prior to application.

By dissolving a teaspoon of **SeaMazing** in one gallon of water... a full spectrum water supplement is recreated for pennies.

Our product, **SeaMazing**, contains all the minerals and trace elements found in the sea in a naturally dehydrated, water-soluble crystal form. The cost of applying **SeaMazing** Minerals in a foliar solution at a rate of five pounds per acre is one-fifth to one-tenth the cost of competitive products.

Dr. Murray chose to utilize sea mineral solids rather than ocean water in his large scale farm experiments due to the high cost of transporting ocean water. Ocean water contains 3 percent mineral solids and 97 percent water.

Q. Are ocean sea water products better than SeaMazing Minerals biologically?

A. Some ocean sea water companies claim **SeaMazing Minerals** are inferior due to the heat generated during solar dehydration. Marine biologists have found that common ocean algae are regenerated and become live when **SeaMazing** is dissolved in water. Therefore, it appears that **SeaMazing** and pure ocean water are biologically the same.

"SeaMazing is created in a desert estuary many miles from civilization."

Q. SeaMazing Minerals are created from coastal water. Is the product pollution free?

A. **SeaMazing Minerals** not only guarantees it is pollution free but provides university lab studies to back it up.

Q. What is the difference between SeaMazing Minerals and other livestock mineral salts that claim to originate from the sea?

A. Several companies sell mineral salts for animal consumption and call their product sea salt. However, their source is either an ancient deposit buried beneath the earth's surface or a sea coast area where heavy rainfall is common. **SeaMazing** is produced in an area with no rainfall.

Ancient sea salt buried beneath the earth's surface has been subjected to leaching by ground water which reduces elemental composition and increases the potential for contamination. Sea salt produced in coastal areas where rainfall occurs is also leached of minerals and trace elements. Once leaching occurs, minerals and trace elements are not perfectly balanced (high in Iron and other metals) and are significantly reduced in number (52 in the competition vs. 90+ in **SeaMazing**). There also appears to be a higher quantity

of un-dissolvable solids per 50 pounds (12 lbs. from the competition vs. one lb. from **SeaMazing**) in many other sea salt mineral products.

The mineral and trace element balance, ratios, and content of **SeaMazing** is essentially the same as the sea water from which it is created. No minerals or trace elements are leached away, therefore, **SeaMazing Minerals** are the only true sea mineral salt available for livestock.

Q. Is SeaMazing exactly the same as Dr. Murray's Sea Solids?

A. Yes, in 1979, Dr. Murray disclosed the location of the mineral deposits to the current owners of the property.

The mineral composition of the seawater that produces **SeaMazing Minerals** has not changed in the past 50 years and there is no industry or pollution present, so we feel confident **SeaMazing** is exactly the same as Dr. Murray used in his experiments.

Q. How much SeaMazing should I apply to my garden, cropland or pasture?

A. Again, along with your order of **SeaMazing Minerals**, you'll receive a bonus application rates and usage report that details the various ways **SeaMazing** can be utilized for livestock, poultry, soil remineralization, pasture hay and all crops.

Q. Why are the trace elements contained in SeaMazing Minerals so important?

A. Trace elements, usually less than one-tenth of one percent, exert powerful influences far beyond their quantity. Scientific understanding of the role of trace elements in plant and human physiology is new and emerged slowly during the last century. It is known that 16 trace elements have critical biological functions, but many more are suspected to play a role in cellular function and molecular design.

Q. Why doesn't the salt or sodium chloride, in SeaMazing Minerals harm the soil and crops?

A. As a result of extensive research, Dr. Murray discovered that soil microbiological activity and plant growth and development are enhanced when the concentration of sodium chloride in seawater derived **SeaMazing** is applied at specific

"SeaMazing is an all-natural way to grow great-tasting vegetables."

rates and in specific dilutions as a foliar spray and in hydroponic solutions.

Q. How does SeaMazing Minerals differ from common salt?

A. Common table salt is pure white crystals of highly refined 97-99 percent sodium chloride. **SeaMazing** is dehydrated seawater in its purest state containing 82-85 percent sodium chloride. It is not a single metal salt but a mixture of 90+ elements in the sea's perfect proportions. The lightest elements (sodium, potassium, calcium and magnesium) are totally balanced with the trace elements (copper, chromium, zinc, manganese, selenium, cobalt, molybdenum, et al).

Q. How does SeaMazing Minerals differ from rock powders?

A. All mineral salts originate in rock. However, a rock powder that contains the full spectrum of elements found in the sea does not exist. John Hamaker, who conducted extensive research with rock powders, stated that 20 percent of any rock powder application should be sea solids minerals.

SeaMazing Minerals, as dehydrated sea water, is water-soluble in the soil matrix. As a result, all nutrients available in mineral rich sea water are immediately available to soil life, and plants' microbial populations rapidly expand by feasting on **SeaMazing Minerals**.

Over time, the microbes then break down the rock powder making their minerals and trace elements available for up to 10 years. Also, because it is water soluble, **SeaMazing** can be dissolved and utilized as a foliar spray while rock powders cannot.

Q. Can SeaMazing be used in hydroponics production?

A. Yes, ground breaking hydroponics formulas were created under Dr. Murray's guidance utilizing both seawater and **SeaMazing Minerals**. Your bonus report contains these hydroponics formulas.

Q. Was Dr. Murray awarded patents for his research?

A. Yes. Two of them:

UNITED STATES PATENT #3,071,457 PROCESS OF APPLYING SEA SOLIDS AS FERTILIZER.

UNITED STATES PATENT #3,250,606 NUTRIENT SEA-SOLIDS SOLUTION FOR HYDROPONIC FARMING

Q. Is SeaMazing always consistent in appearance?

A. No, **SeaMazing** is pure dehydrated seawater created naturally in a desert estuary by tidal movements. Therefore, color

variations occur based on the speed of currents and tides moving the water and wind conditions. The color of **SeaMazing** varies from off-white to various shades of beige... and... at times, contains small amounts of wind-carried sediment.

*"SeaMazing Minerals
ready for harvest"*

Q. Why does SeaMazing appear to act as a pesticide and fungicide when used as a foliar spray?

A. First of all it's not a pesticide and it's not a fungicide. However, in our world, insects and diseases play important roles. They are attracted to weak and sick organisms and destroy them. The weak and sick are killed off and the healthy and strong are left to reproduce, thereby, improving the gene pool.

When **SeaMazing** is applied as a foliar spray to a plant's leaf surface and/or incorporated into the soil, the plant metabolizes many of the 90 plus minerals and trace elements into its sap or fluid. Once these minerals and trace elements are incorporated into the plant's chemistry, the plant becomes healthier and its sap or fluid becomes infinitely more complex.

Insects and fungal diseases, due to their simple physiology, cannot digest this complex mixture. Therefore, they leave these plants alone and attack and destroy the weaker plants without the complex chemistry. This could explain why plants that exhibit a higher Brix (sugar content) reading are less prone to insect and disease problems.

Q. Has the sea water used to create SeaMazing been polluted by the Deep Horizon Oil Spill?

A. No, **SeaMazingMinerals** remains pollution free. It is not created from the Gulf of Mexico sea water. Currently, the sea that provides the sea water for **SeaMazing** does not contain any oil rigs, and no exploration for oil or natural gas is planned, nor has exploration ever been conducted.

Q. Does warm water help dissolve SeaMazing and if so, what is the maximum temperature that should be used?

A. Warm water can help speed up the process, but be aware that water will only hold a certain amount of mineral in suspension. If you have very soft water, more will dissolve than in hard water. Agitation also helps when dissolving larger amounts. The larger crystals that you might find are also slower to dissolve. Use only cool or tepid water because **SeaMazing** contains ocean biological micro-organisms that could be harmed by very hot or boiling water.

Q. Are SeaMazing Minerals harmful to horses, what is the suggested application rate, and does temperature make a difference?

"Livestock thrives on pasture treated with SeaMazing Minerals."

A. SeaMazing Minerals can be sprayed on pasture and fed to horses as a mineral salt. Since **SeaMazing** is a totally natural and safe supplement, it can be applied while horses are in the pasture. We suggest five pounds per acre foliar applied every six weeks throughout the growing season, and apply from dawn until temperatures reach 80° F. Also, **SeaMazing** needs to be on the plant one hour prior to rain.

Q. How is the SeaMazing Mineral supplement utilized in the production of nutritionally dense foods for the self-reliant, sustainable agriculture community?

A. SeaMazing is a bio-stimulant and provides over 90 minerals and trace elements. As a fertilizer in the soil, it re-mineralizes the earth and feeds the microbial populations. As a foliar fertilizer, it re-mineralizes the growing plant and feeds the micro-organisms on the soil surface as well as the plant tissue. **SeaMazing Minerals** can increase plant vitality and production.

Q. What are the application rates and instructions for lawn care?

A. Use one pound **SeaMazing Minerals** to one gallon water and stir until the crystals are 98 percent dissolved. Normally you will always find a few white crystals along with some rock powder remaining in the bucket. Pour the liquid into your receptacle and set the dial for one teaspoon per gallon. Spray lawn every 21 days.

Q. Can SeaMazing be mixed with ProtoGrow?

A. Yes. ProtoGrow is an all-natural fertilizer that contains kelp and liquefied fish from the North Atlantic Sea. For additional NPK, we suggest mixing in ProtoGrow.

Q. What is the shelf life of the SeaMazing Mineral Supplement?

A. Infinite when stored covered and protected from moisture.

Q. Can SeaMazing be used with Miracle Grow?

A. Yes, mix one teaspoon per gallon of Miracle Grow Fertilizer mix.

Q. How can I get started using SeaMazing Minerals?

A. Easy. **SeaMazing Minerals** comes in three different sizes. Complete ordering instructions, along with what you will receive are below.

Good Deal: 5 pound bucket for just \$44.97
(Plus shipping and handling)

Order a 5 pound bucket of **SeaMazing Minerals** and, along with your order, you'll receive the bonus application rates and usage report that details the various ways **SeaMazing** can be utilized for backyard food production, livestock, poultry and soil re-mineralization.

Better Deal: 10 pound bucket for just \$79.97
(Plus shipping and handling)

Order a 10 pound bucket of **SeaMazing Minerals** and, along with your order, you'll receive the bonus application rates and usage report that details the various ways **SeaMazing** can be utilized for backyard food production, livestock, poultry and soil re-mineralization.

Best Deal: 25 pound bucket of SeaMazing for just \$149.97
(Plus shipping and handling)

Order a 25 pound bucket of **SeaMazing** and, along with your order, you'll receive the bonus application rates and usage report that details the various ways **SeaMazing** can be utilized for backyard food production, livestock, poultry, soil re-mineralization and... Dr. Murray's book: "**Sea Energy Agriculture: Nature's Ideal Trace Element Blend for Farm, Livestock, Humans**" (A \$16.00 value, yours free).

There's an additional shipping and handling fee added to each order, amount varies by weight.

IT'S EASY TO ORDER:

For Fastest Service: Click the "**BUY NOW**" button at the bottom of this page, and it will take you to our 24-hour secure online order form.

For Fast Service: Have your credit card ready and call our Priority Order Hotline and tell one of our friendly staff members you want to order **SeaMazing**. They'll take care of the rest. The number to call is...

1-877-327-0365
(Priority Order Hotline)

To Order By Check Or Money Order: [CLICK HERE](#) to print the "Pay By Mail Form" and send it along with your payment for the amount you want (plus \$10.00 shipping and handling) to:

Solutions From Science, Inc.
Attn: SeaMazing Minerals

2200 Illinois Rt. 84
P.O. Box 518
Thomson, IL 61285

Checks and Money Orders should be made payable to: **Solutions From Science.**

Sincerely,

Bill Heid, President
Solutions From Science, Inc.

P.S. Due to the unique nature of **SeaMazing Minerals**, and the fact these sea mineral solids are only mined periodically throughout the year, supplies can become limited. Order now, today, to ensure you're able to get the amount you need.
